# ABOUT US

## **Tisa Industrial Company**

Tisa Industrial Company is one of the leading companies in the production and distribution of aluminum-related products. With the goal of providing high-quality products and utilizing modern technical knowledge, the company operates in various fields such as the production of aluminum ingots, aluminum billets, aluminum scrap processing, and the production of soft aluminum. By using advanced technology and skilled labor, Tisa Industrial has secured a significant position in the aluminum industry in Iran and the region.

Tisa Industrial consistently prioritizes the quality of its products and, by adhering to international standards in its production processes, has successfully gained customer satisfaction. The company produces durable and highly efficient aluminum products using advanced equipment and precise quality control systems.

Overall, Tisa Industrial is recognized as one of the reputable and capable companies in the aluminum industry, leveraging experience, technical knowledge, and a commitment to quality and the environment, and continues to move towards sustainable development and success.

## **Aluminum:**

Due to its light weight, corrosion resistance, and high malleability, aluminum is one of the essential materials in various industries.

Tisa Industrial significantly contributes to industries such as construction, automotive manufacturing, packaging, and others by producing various types of aluminum.

Tisa Industrial, with the goal of providing the best quality and services in the production and distribution of various metal products, especially aluminum and copper, is proud of its efforts. Below is a detailed description of our various products.

Tisa Industrial Company is proud to produce and distribute a wide range of metal products, striving to provide the best quality and services to our customers. Below, we provide more details about each of our products:

## **Aluminum Ingots**

Our aluminum ingots are produced in various purities and sizes:

- **Different Purity Levels:**

- 99.7% to 99.9%: These ingots are selected based on industry requirements and are suitable for use in various sectors.

- **Applications:**

- **Automotive Industry:** Used in the production of body and engine parts.
  - **Aerospace Industry:** For manufacturing lightweight and durable components.
  - **Electronics:** In the production of casings and internal parts.

## Iron Scrap

Our iron scrap includes a variety of types, categorized as follows:

- Steel Scrap:
  - Rebar: From construction projects.
  - Sheets and Beams: From factories and civil engineering projects.
- Applications:
  - New Steel Production: Used in steel industries and construction of civil structures.

## Aluminum Scrap

This category includes various types of recyclable aluminum:

- Types of Aluminum Scrap:

- Aluminum Profiles: From construction and furniture industries.
- Cans and Packaging: Scrap from the food and beverage industries.

- Applications:

- Recycling: For the production of new aluminum ingots and cost reduction.

## Copper Scrap

Our copper scrap consists of high-quality raw materials:

- Types of Copper Scrap:
  - Copper Cables: From electrical projects.
  - Industrial Parts: Including connectors and electrical equipment.
- Applications:
  - Recycling: For use in the electrical and electronics industries.

## Soft and Dry Scrap

This category includes various materials:

- Soft Scrap:
  - Rubber and Plastic: From packaging and industrial production.
- Dry Scrap:
  - Metals and Sections: Including sheets and other metal parts.
- Applications:
  - Recycling and Reproduction: Especially in the plastics and rubber industries.

## Copper Cathode

Our copper cathodes are produced with the highest purity:

- Purity over 99.99%: Ensuring the highest quality of the product.
- Applications:
  - Electrical Cable Production: Used in electrical equipment and wiring.
  - Construction Industry: In plumbing and piping systems.

## Full Scrap

Full scrap includes various types of metal waste:

- Types of Scrap:
  - Various Metal Scraps: Including aluminum, copper, brass, and other metals.
- Applications:
  - Reproduction: Used in various industrial processes.

## Alloy Ingots

These products consist of different combinations of aluminum and other metals:

- Types of Alloys:
  - Aluminum-Copper: For specialized applications in the industry.
  - Aluminum-Silicon: Used in automotive and aerospace industries.
- Applications:
  - Production of Special Parts: Such as corrosion-resistant components.
